EVALUATING OUTPUT OF A MASS AIR FLOW SENSOR

REASONS FOR ALLOWANCE

The following is an Examiner's statement of reasons for allowance:

Independent claims 1, 7, and 17 have been found to be allowable over the prior art because the prior art fails to teach or suggest evaluating a signal output of a mass air flow sensor of an engine comprising dividing a running sum, which is defined as mass air flow values integrated over a plurality of time intervals, by a total of said time intervals to determine a net mass air flow.

Independent claim 13 has been found to be allowable over the prior art because the prior art fails to teach or suggest a method of evaluating output of a mass air flow sensor comprising dividing a running air mass total, which is defined as an integrated mass air flow value over a time interval between two consecutive rising edges of an air flow sensor outputted digital signal, by a total of said time intervals to determine a net mass air flow.

Art Unit: 2855

Independent claim 23 has been found to be allowable over the prior art because the prior art fails to teach or suggest evaluating an output of a mass air flow sensor comprising dividing a running sum, which is defined as mass air flow values integrated over a corresponding subinterval of a delta time interval, by the delta time interval to determine a net mass air flow.

All of the remaining claims have been found to be allowable over the prior art due to said claims' dependency on one of the above claims.

CONTACT INFORMATION

Any comments considered necessary by the Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
